

Ticket Reconciliation Software

Ticket balancing for cage, kiosk and soft count rooms

Reconcile redeemed tickets efficiently. Save significant time in your cage, kiosk and count rooms.

The new Ticket Reconciliation Software (TRS) for JetScan iFX® i100 and i200 scanners matches casino ticket validation numbers with dollar amounts, making it easy to generate accurate reports for balancing and auditing while remaining compliant with gaming regulations.

Match totals with non-invasive access to ticket tracking systems

For more than a decade, Cummins Allison has offered dependable ticket processing equipment capable of collecting piece counts and validation numbers for printed reports and file exporting. Exported ticket files are sent to host ticketing systems, which match dollar amounts with the validation numbers contained in the exported file.

TRS saves time and reduces errors over manual processing

Some casino departments, however, do not have access to technology that extracts dollar amounts from tickets and use other methods.

In some cases, personnel are manually adding values printed on tickets to generate a tape total. While performing 10-key addition to derive a total is a solution, the process is errorprone and requires time that could be better spent serving a casino customer's needs.

The TRS solution eliminates manual labor and consolidates processes. Customers can improve accuracy, increase efficiency and free up time for more value-added tasks by using the fully automated casino ticket reconciliation system.

Ticket Reconciliation Software at a glance

- Associate dollar amounts with ticket validation numbers transmitted by JetScan iFX i100 or i200 devices
- Create various types of reports such as cashier, shift and day reports reflecting totals for ticket data
- Review ticket status (redeemed, duplicate, etc.).
- Edit or delete a batch for reprocessing
- Perform post-processing correction of the validation number and amount by using a ticket image
